

AVERNIXX · AI SOLUTIONS & SERVICES · SINGAPORE

Governance-first AI strategy, automation and custom solutions.

Practical AI that fits how your organisation works, with people in control of the decisions that matter.

WHO WE ARE

Avernixx is a Singapore-based AI solutions and services firm. We help organisations identify practical AI opportunities, redesign workflows, build custom solutions and adopt AI with appropriate governance and human oversight.

We began in 2019 as a web and software development firm, so every AI project is built on solid engineering, integration and data protection practice.

CORE CAPABILITIES

Seven ways we help

01 AI strategy & readiness

Use-case discovery, prioritisation, readiness and roadmap planning.

02 Workflow automation & AI agents

Automating repeatable workflows, bounded AI agents and human approval steps.

03 Custom AI & software

Custom AI applications, integrations, web and software development.

04 Data science & analytics

Data preparation, analysis, forecasting, reporting and dashboards.

05 AI governance & risk

Policies, risk registers, accountability, oversight, auditability and practical controls.

06 Workshops & enablement

Complimentary introductory AI Discovery and AI Governance workshops.

07 Grant application support

Help assessing potential fit and preparing application and project documentation, subject to scheme rules and approval.

Six customisable AI automations

Ready-made starting points for a faster start. Each one is tailored to the client's rules, systems and approval steps.

AI Omnichannel Sales Agent

Quotation & Follow-up

Omnichannel: WhatsApp, email, website chat, Facebook Messenger and Instagram in one place

HOW WE WORK

Business needs first, governance throughout

We start with business needs and constraints, then consider feasibility, data readiness, integration, expected value and governance. Scope, deliverables, fees and any grant assumptions are confirmed separately before paid work begins.

OUR OPERATING DISCIPLINE

The GARD Framework

G

Governance

What the system may and may not do, and where a person must decide, defined before the build.

A

Architecture

Workflows that reflect real operations, with controls embedded and integrations kept practical.

R

ROI

Use cases ranked by return, with a baseline and measures agreed up front.

D

Defensibility

Auditability, transparency and accountability that stand up to scrutiny from clients, auditors and regulators.

RECOGNITION

CIOReview APAC, 2026

Top AI-Powered Automation Agentic Solutions in APAC 2026, after evaluation by a panel of C-level executives, industry leaders and the editorial board.

BNP Media, 2023

Shirley Lim named among the Top 25 Women in Technology 2023.
